

Why Chiropractic?

Chiropractic Care

Chiropractic is a health care profession that focuses on disorders of the musculoskeletal system and the nervous system, and the effects of these disorders on general health. Chiropractic care is used most often to treat neuromusculoskeletal complaints, including but not limited to back pain, neck pain, pain in the joints of the arms or legs, and headaches.

Chiropractic therapies, when utilized in conjunction with chiropractic adjustments, aid the healing process of injured areas.

In our office, we use several different therapies that we found, through 20 years of research, which best benefit the patient to maximize recovery, and minimize the chance of reoccurrence of the problem.
