

Foot Levelers Orthotics®

Your feet are the foundation of your body. They support you when you stand, walk, or run. And they help protect your spine, bones, and soft tissues from damaging stress as you move around. Your feet perform better when all their muscles, arches, and bones are in their ideal stable positions.

The foot is constructed with three arches which, when properly maintained, give exceptional supportive strength. These three arches form a supporting vault that distributes the weight of the entire body.

If there is compromise of one arch in the foot, the other arches must compensate and are subject to additional stresses, which usually leads to further compromise.

It's a chain reaction.

Healthcare professionals know alleviating pain in one part of your body often requires treating a different part. The pain you feel in your neck could be caused by a misalignment in your spine that is caused by unbalanced positioning in your feet. See? It's a chain reaction.

By stabilizing and balancing your feet, Foot Levelers orthotics enhance your body's performance and efficiency, reduce pain, and contribute to your total body wellness. Our orthotics complement your healthcare professional's treatment when you stand, walk, and live your active life.

How Spinal Pelvic Stabilizers Work

Patients with certain types of spinal problems benefit from custom made orthotic support (SPS Stabilizers, Shoethotics®, or Sandlenthotics®). These devices stabilize the foundation of the pelvis and spine by first addressing structural problems with the feet, thereby reducing abnormal forces and stresses, while enhancing structural and functional relationships.

Foot Levelers, Inc., a leading supplier for 50 years, creates custom-made, flexible Spinal Pelvic Stabilizers to match each patients' unique needs.

Unlike other stabilizing technologies, which use rigid material to force the feet into a theoretical "ideal" position, and may result in muscle atrophy and abnormal nerve proprioception, Foot Levelers' allow controlled, supported movement for the dynamic human body.

At Highway 7 Chiropractic, we use a digital scanning system to take digital images of your feet directly in our office. We then send the scanned images to Foot Levelers skilled laboratory technicians to create unique Spinal Pelvic Stabilizers designed to correct and support areas of weakness.

For more information on Foot Levelers Orthotics® and the science behind the ingenuity, refer to the designers website at www.footlevelers.com.
